

NumPy Exercises

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

Import NumPy as np

```
import numpy as np
```

Create an array of 10 zeros

```
np.zeros(10)  
array([ 0.,  0.,  0.,  0.,  0.,  0.,  0.,  0.,  0.,  0.])
```

Create an array of 10 ones

```
np.ones(10)  
array([ 1.,  1.,  1.,  1.,  1.,  1.,  1.,  1.,  1.,  1.])
```

Create an array of 10 fives

```
np.full(10,5)  
array([ 5.,  5.,  5.,  5.,  5.,  5.,  5.,  5.,  5.,  5.])
```

Create an array of the integers from 10 to 50

```
np.arange(10,51)  
array([10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25,  
26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42,  
43, 44, 45, 46, 47, 48, 49, 50])
```

Create an array of all the even integers from 10 to 50

```
np.arange(10,51,2)  
array([10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40,  
42, 44, 46, 48, 50])
```

Create a 3x3 matrix with values ranging from 0 to 8

```
arr=np.arange(0,9)  
arr=arr.reshape(3,3)  
arr
```

```
array([[0, 1, 2],
       [3, 4, 5],
       [6, 7, 8]])
```

Create a 3x3 identity matrix

```
arr=np.identity(3)
arr

array([[ 1.,  0.,  0.],
       [ 0.,  1.,  0.],
       [ 0.,  0.,  1.]])
```

Use NumPy to generate a random number between 0 and 1

```
arr=np.random.random(1)
arr

array([ 0.42829726])
```

Use NumPy to generate an array of 25 random numbers sampled from a standard normal distribution

```
arr=np.random.normal(0,1,25)
arr

array([ 1.32031013,  1.6798602 , -0.42985892, -1.53116655,
        0.85753232,
        0.87339938,  0.35668636, -1.47491157,  0.15349697,
        0.99530727,
        -0.94865451, -1.69174783,  1.57525349, -0.70615234,
        0.10991879,
        -0.49478947,  1.08279872,  0.76488333, -2.3039931 ,
        0.35401124,
        -0.45454399, -0.64754649, -0.29391671,  0.02339861,
        0.38272124])
```

Create the following matrix:

```
arr=np.arange(0.01,1.01,0.01)
arr=arr.reshape(10,10)
arr

array([[ 0.01,  0.02,  0.03,  0.04,  0.05,  0.06,  0.07,  0.08,  0.09,
        0.1 ],
       [ 0.11,  0.12,  0.13,  0.14,  0.15,  0.16,  0.17,  0.18,  0.19,
        0.2 ],
       [ 0.21,  0.22,  0.23,  0.24,  0.25,  0.26,  0.27,  0.28,  0.29,
        0.3 ],
       [ 0.31,  0.32,  0.33,  0.34,  0.35,  0.36,  0.37,  0.38,  0.39,
        0.4 ],
```

```

0.5 ],
0.6 ],
0.7 ],
0.8 ],
0.9 ],
1.  ]))

```

Create an array of 20 linearly spaced points between 0 and 1:

```

arr=np.linspace(0,1,20)
arr

array([ 0.          ,  0.05263158,  0.10526316,  0.15789474,
        0.21052632,  0.26315789,  0.31578947,  0.36842105,  0.42105263,
        0.47368421,  0.52631579,  0.57894737,  0.63157895,  0.68421053,
        0.73684211,  0.78947368,  0.84210526,  0.89473684,  0.94736842,
        1.          ])

```

Numpy Indexing and Selection

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

```

mat = np.arange(1,26).reshape(5,5)
mat

array([[ 1,  2,  3,  4,  5],
       [ 6,  7,  8,  9, 10],
       [11, 12, 13, 14, 15],
       [16, 17, 18, 19, 20],
       [21, 22, 23, 24, 25]])

# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE

mat=mat[2:,1:]
mat

array([[12, 13, 14, 15],
       [17, 18, 19, 20],
       [22, 23, 24, 25]])

```

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

```
mat[1][-1]
```

```
20
```

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

```
mat = np.arange(1,26).reshape(5,5)
mat=mat[0:3,1].reshape(3,1)
mat
```

```
array([[ 2],
       [ 7],
       [12]])
```

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

```
mat = np.arange(1,26).reshape(5,5)
mat[-1]
```

```
array([21, 22, 23, 24, 25])
```

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

```
mat = np.arange(1,26).reshape(5,5)
mat[3:]
```

```
array([[16, 17, 18, 19, 20],
       [21, 22, 23, 24, 25]])
```

Now do the following

Get the sum of all the values in mat

```
mat = np.arange(1,26).reshape(5,5)
print(np.sum(mat))
```

```
325
```

Get the standard deviation of the values in mat

```
mat = np.arange(1,26).reshape(5,5)
print(np.std(mat))
```

```
7.2111025509279782
```

Get the sum of all the columns in mat

```
mat = np.arange(1,26).reshape(5,5)  
print(np.sum(mat,0))
```

```
array([55, 60, 65, 70, 75])
```
